DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al (5,825,761) in view of Zehavi (6,496,643).

Regarding claims 1-3 and 7, Tanaka discloses a method in which a wireless unit and a base station can communicate at different rates. The base station periodically receives rate information from the wireless unit and adjusts the communication rate based on the received rate information (see abstract; col. 4, lines 1-10). Tanaka does not specifically disclose the base station transmit at a second rate not equal to the first rate. However, Zehavi discloses a CDMA system in which the base station operate at a rate independent of the information rate received from a wireless unit such that the communication between the base station and the wireless unit is a function of the distance between the base station and the wireless unit (see figure 4; col. 6,

lines 58-67). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to communicate with a wireless unit at a rate different from the rate of the rate information in order to improve system flexibility.

Regarding claim 4, Tanaka in view of Zehavi does not specifically disclose receiving rate information once every three slots. However, to receive rate information once every three or every 5 to 8 slots as proposed by UMTS is a matter of choice. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to receive rate information once every three slot instead of 5 to 8 slots as proposed by the UMTS in order to improve system performance.

Allowable Subject Matter

4. Claim 5 and 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
